Cyber Insurance For Defense Contractors

CMMC Compliance Strengthens Security
Cyber Insurance Transfers Financial Risk

For defense contractors navigating CMMC requirements, cyber insurance can be a practical addition to their existing cybersecurity program.

You've Already Done the Heavy Lifting

If your company is working toward or maintaining CMMC alignment, you are already investing in stronger cybersecurity controls, better processes, and a more resilient operation.

A cyber insurance policy is not a replacement for cybersecurity, nor a substitute for compliance. It is a practical way to support the financial side of cyber risk alongside the security work already underway.

For many defense contractors, it is a natural next step that complements the investment already made in cybersecurity.

Cyber Insurance Adds

- Incident response coordination
- Business interruption support
- Data and system restoration
- Legal and forensic response
- Notification & communications
- Third-party liability protection
- Privacy liability protection
- Reputation management

Coverage varies by policy and insurer.

Cyber Insurance Fits Naturally Alongside CMMC

CMMC Compliance Strengthens Security + **Cyber Insurance Transfers Financial Risk**

CMMC helps strengthen your cybersecurity foundation. Cyber insurance can help when a cyber event leads to response costs, operational disruption, or liability claims. Together, they help address both the security side and the financial side of cyber risk.

This is not about adding complexity. It is about giving companies that already take security seriously another layer of practical support.

Stronger security controls on one side. Financial risk transfer on the other.

Response, Recovery & Continuity

Cyber insurance can provide practical support for the financial side of cyber risk without adding unnecessary complexity.

Support When It Matters Most

One of the biggest advantages of cyber insurance is that it is not only about financial reimbursement. It can also bring structure and support to the response process. Many cyber insurers provide access to breach response resources, incident coordination, and experienced professionals when an issue arises.

That matters for companies of every size. It means leadership does not have to manage everything alone during a stressful event.

Cyber Insurance Is An Incident Response Resource

Not Just a Policy

The Work You're Already Doing Helps

For companies working toward or maintaining CMMC alignment, the insurance process is often more straightforward than expected. The same discipline that supports stronger cybersecurity can also support a better insurance submission.

Underwriters commonly look at practical topics such as backups, phishing controls, remote access, and incident readiness. Those are familiar conversations for organizations already taking cybersecurity seriously.

Solid security work strengthens the insurance conversation.

Straightforward Process

1 Understand the operations and risk profile

2 Review current cybersecurity maturity and business needs

3 Explore coverage options that fit the organization

4 Keep the process focused, efficient, and easy to navigate

A Practical Addition to Your Cybersecurity Program

If your company is complying with or working toward CMMC requirements, cyber insurance may be a practical next step. It can help address the financial side of cyber risk and support response, recovery, and continuity without changing the security work your team is already doing.
