

Teramis: Precision CUI Discovery for the Defense Industrial Base

Most Organizations Don't Actually Know Where Their CUI Is.

Controlled Unclassified Information (CUI) is often scattered across legacy email archives, file shares, and cloud repositories, making manual identification, classification, and protection nearly impossible.

Today's data discovery tools were built for generic use cases, such as identifying Social Security numbers or credit card patterns. CUI is different. It is inconsistently labeled, buried in complex file types, and interpreted differently across federal agencies. That's why traditional data discovery fall short, returning thousands of false positives or missing CUI entirely.

The Teramis Advantage

Teramis is a purpose-built CUI discovery and continuous monitoring platform that helps defense contractors, MSPs, and CMMC advisory firms identify, validate, and protect Controlled Unclassified Information (CUI) for CMMC compliance.

Why Teramis Delivers Superior ROI

- **Purpose-Built for Defense Contractors** – Designed specifically for CUI and CMMC compliance, not generic data discovery.
- **Mathematical Precision at Scale** – Uses ANSI and MIL standards to deliver up to 99.99% accuracy and drastically reduce false positives.
- **CUI Spillage Management** – Helps identify and contain misplaced CUI before it becomes a reportable incident or compliance liability.
- **Reduces Assessment Friction** - Reduces scoping disputes and late-stage CUI surprises.
